

DESCRIPTION: SS Rejuvenator is made up of a strong blend of solvents, acrylic resin and surfactants and is used to restore existing solvent based acrylic sealers that have started to fade, peel, crack, delaminate and deteriorate. Also clears up white spots or blushing due to moisture. SS Rejuvenator melts the existing solvent based acrylic sealer and helps restore the original appearance or prepare the existing sealer for another application of acrylic sealer if needed. For professional use only.

DIRECTIONS: Apply generously to surface and apply at a rate of 100 – 300 square ft. per gallon depending on the texture of the surface using a nap roller. Apply using long slow strokes with a roller to allow the SS Rejuvenator time to melt the existing sealer. Apply a second application if needed for heavy acrylic sealer build up or extreme moisture damage to existing acrylic sealer.

NOTES: Test compatibility prior to application. Some Styrene Acrylic Sealers may not be compatible.

CAUTION: Flammable Liquid. Wear OSHA approved respirator. Protect from freezing. Keep out of reach of children
